

Secure from code to cloud

Enhance security during and after migration to Microsoft Azure

The most successful innovations come backed by world-class security. With Azure, we offer built-in protection across cloud workloads, reducing risk within hybrid and multicloud environments.

Unmatched foundational security

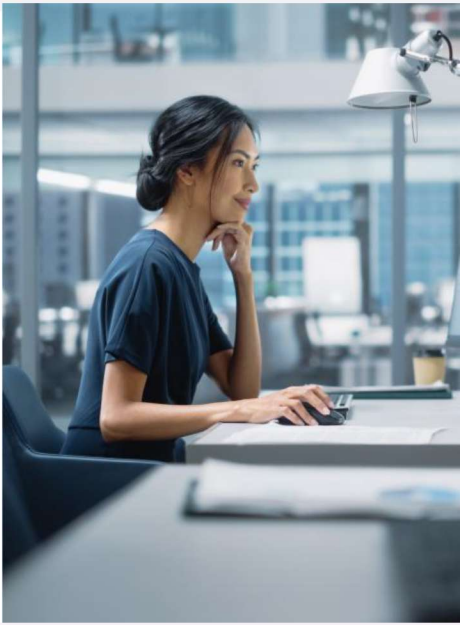

Azure provides a secure foundation with multilayered data protection monitored by leading security experts.

34,000 Full-time security professionals

78 trillion Global signals analyzed daily

USD20 billion Security investment over the next five years

100+ Compliance certifications, a leader in the cloud industry

Comprehensive, built-in security

Azure offers industry-leading protection that helps prevent cyberattacks.

Copilot for Security

Microsoft Defender for Cloud

Microsoft Sentinel

Azure network security

Confidential computing

GitHub Advanced Security

Defender for Cloud protects cloud-based apps and workloads from cyberthreats.

Microsoft Sentinel provides AI-powered proactive threat detection, investigation, and response.

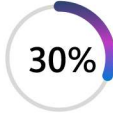

Copilot for Security protects at the speed and scale of AI, with AI-driven guidance and analysis across identities, devices, data, clouds, and apps.

Reduction in likelihood of a breach¹

Reduction in incidents with Copilot for Security²

Reduction in incident mean time to resolution³

Microsoft Azure

As a Microsoft Certified Partner, Kellton brings 15+ years of cloud-native innovation, 250+ Azure-certified experts, and a track record of success across industries and continents. Together with Microsoft, we empower organizations to reimagine their digital core and unlock enterprise agility, security, and scalability. Our strength lies in delivering cloud-native, AI-led, and industry-specific solutions built on the Microsoft Azure ecosystem.
